Atlas Copco Light tower A bright solution for hard work

QLT M10

QLT M10 Light tower

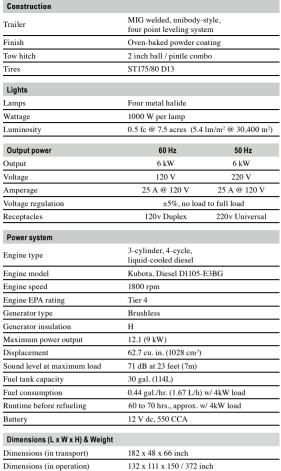

Features and benefits

Metal halide lamps

The metal halide lamp technology is one of the most efficient ways of turning electrical energy into light. It requires less power, produces more light and provides the ideal lighting for working, sport and event areas. The expected lifetime of a metal halide lamp in a normal operation is very long, and the failure ratio is the lowest of all types of lamps.

Proven concept

The new QLT M10 is based on a successful existing concept that has been used on the market for a long time. It includes a metallic enclosure with wide service doors, an electrical cubicle for control and protection, a mast that will extend vertically up to 31 ft and that can be rotated 360°, stabilization legs and an on-road undercarriage. The QLT M10 Light Tower is easy to operate and extremely light and manoeuvrable, making it very simple to position at the desired location for optimal work area lighting.

Dattery	12 V dc, 550 CCA
Dimensions (L x W x H) & Weight	
Dimensions (in transport)	182 x 48 x 66 inch
Dimensions (in operation)	132 x 111 x 150 / 372 inch
Weight	1800 lbs

Average lighting versus distance **QLT M10** 33 ft / 200 Lx 82 ft / 100 Lx 115 ft / 50 Lx
